

Thales @ Dubai Airshow 2015

Press Schedule

Sunday 8th November

Press briefings	Thales Stand #624	Time
Star-NG The Thales new generation Air Traffic Control (ATC) radar not only features technology that makes it ideal for civil/military interoperability but also addresses emerging challenges like windfarms and 4G network frequency interference.		12:00-12:30
C-UAS Counter malicious Unmanned Aircraft Systems - A unique and total systems approach to countering the UAS threat, from detection and identification through to neutralization.		14:00-14:30
Smarter, safer, smoother airport operations With a full range of products, systems and services, Thales offers complete, integrated solutions tailored to each airport's needs. Thales airport security solutions are modular, scalable and intelligent. They are designed from the outset to accommodate new procedures and technologies as these emerge.		15:00-15:30

Monday 9th November

Press briefings	Thales Stand #624	Time
Inflight experience and connectivity Through AVANT the most advanced android based multi-touch HD IFE system on the market Thales showcases connectivity services and solutions designed to enhance passenger experience. Featured at the show are the applications that allow passengers to experience the full suite of connected services available on AVANT and that enable an airline to build the passenger experience they wish to create in order to build brand image, customer retention and aid in their bottom line.		12:00-12:30

THALES

Latest AMASCOS® mission system & SEARCHMASTER® radar

14:00-14:30

Come and discover the latest generation of AMASCOS mission system combined with the SEARCHMASTER multi-role surveillance radar, the 5-in-1 airborne solution fulfilling Anti-Surface Warfare, Anti-Submarine Warfare, Maritime Surveillance, Ground surveillance and Mapping, and Air Tactical Support Missions.

Tuesday 10th November

Press briefings

Thales Stand #624

Time

Image'Inn

11:00-11:30

Discover our airborne optronic systems, with our multi-function pod family and associated new concepts. You will be able to watch a live demonstration with our recent innovative lab Image'Inn, recreating in real time, and in a completely interactive environment, the operational use of imagery during a flight.

New generation of Electronic Flight bag (EFB) applications: the Door-to-Door experience **12:00-12:30**

This new integrated applicative solution for EFB/tablets supports all pilot activities and enhances flight safety and operational efficiency around three main axes: mission, documentation and situational awareness. This modular offer is adapted from low cost to premium software functions and comprises airline connectivity capability.
