

ELETTRONICA@IDEX 2021 – SAFER SEAS WITH ELETTRONICA

Elettronica has enjoyed a 30-year partnership with the UAE armed forces, working tirelessly to help protect the country's navy.

The waters around the United Arab Emirates and the wider Middle East are turbulent. Navies face illegal activities on the high seas, the ever-present threat of terrorism and the proliferation of Anti-Ship Missiles (AShMs).

These threats can be mitigated through robust naval electronic warfare systems helping crews understand what is happening in the electromagnetic spectrum and to jam electronic threats when they appear.

Elettronica has enjoyed a long history of partnership with the United Arab Emirates (UAE) Navy, having supported major acquisitions by the force since the company began its partnership with the UAE back in the early 1990s. Today the firm's expertise, capabilities and products are trusted by the UAE Navy to keep its personnel and vessels safe, as they are by other navies across the world.

This year's IDEX Exhibition held at the Abu Dhabi National Exhibition Centre between 21st and 25th February sees Elettronica exhibiting a range of services, solutions and products helping to protect the seas throughout the region.

Visitors to stand 06-B15 can learn about Elettronica's use of advanced technologies like artificial intelligence, machine learning and cyber security, and how these are used in state-of-the-art services and products supporting the naval domain.

Advanced Technologies

Advanced technologies are at the heart of Elettronica's naval electronic warfare capabilities and services. The firm has an enviable reputation in the naval domain, its expertise and products being trusted by the navies of France and Italy among others. The firm's naval EW systems use the latest technologies like active electronically scanned arrays and a modular design philosophy to outfit a diverse range of ships. Elettronica's naval EW products offer superb performance even in electromagnetically congested environments. They are effective against simultaneous threats and are sensitive to even the most discreet signals.

It is not just about the products. Elettronica works closely with navies to understand their needs and provide them with world-beating solutions using ITAR-free technologies at competitive prices. Visit stand 06-B15 to learn more.
